

## **RETRACTING PUBLISHED PAPERS**

A published paper will be retracted in the event of violation of the rights of a publisher, the copyright holder or the author, violation of professional code of ethics, i.e. in the event that the same manuscript has been sent to multiple journals at the same time, false claims of authorship, plagiarism, manipulation of data with the aim of committing fraud, as well as all other cases of serious violations of the ethical standards. In certain cases, a published paper may be retracted in order to correct subsequently discovered errors.

The standards for resolving situations when a retraction is compulsory are defined by libraries and scientific bodies, and the same practice has been adopted by the Serbian Journal of the Medical Chamber: a URL to the retraction notification is included in the electronic version of the source article (the one being retracted). The retracted article is kept in its source form, but with a watermark in the PDF document, on every page, indicating that the article has been retracted.
